

Project Model & Poster Presentation - 2023

Civil Engineering project model and poster presentation events serve as platforms for showcasing innovative solutions, designs and methodologies within the field. This event was conducted on 27th may 2023 in STIST . Almost 6 groups of s8 students present their projects aimed at addressing pressing societal needs and challenges. These events typically feature participants presenting physical models accompanied by posters that detail their projects. Presentations encompass a wide range of topics within civil engineering including infrastructure development, transportation systems, environmental sustainability and urban planning. Participants provide comprehensive explanation of their projects, covering aspects such as project objectives, methodology, results and potential real – world applications. They highlight the creativity, technical prowess, feasibility and environmental impact of their solution. Participating in these events offers numerous benefits, including opportunities to showcase one's work, receive feedback from experts, network with peers and professionals.
